
Personalized Support Service for Patients and Clinicians

- Printer-friendly Version -

Our Mission

Clinical Trials Quebec's mission is to facilitate access to clinical research for all users with the help and support of the Government of Quebec. We support patients and their families, as well as health professionals in their efforts to learn about clinical research opportunities and limitations.

Personalized Support Service for Patients and Clinicians

The Personalized Support Service of Clinical Trials Quebec gives patients, their relatives and health professionals a summary report of available clinical trials that correspond to their criteria. This service is free of charge and is intended for all Quebecers with any medical condition, regardless of their place of residence.

About Us

The team of health professionals at Clinical Trials Quebec aims to facilitate the communication between health care teams and patients wishing to participate in a clinical trial. Thereby, we work with the Ministry of Health and Social Services, the institutions in the Quebec health network, as well as with clinicians, researchers, patient groups and other experts in the medical and scientific fields.

We also aim to improve the public's knowledge of clinical research in order to make Quebecers aware of the role and importance of research in their health care system.

Our Personalized Support Service

Through the Personalized Support Service, our qualified staff conducts searches for clinical trials based on requested criteria, and free of charge. The results of this search, presented in the form of a report, allow patients and health professionals to initiate or facilitate discussions regarding a potential participation in a clinical trial. The team of health professionals at Clinical Trials Quebec provides support in finding clinical trials; however, the decision to participate in a trial must come entirely from the patient, following a discussion with their health care provider.

For Patients and Their Families

At Clinical Trials Quebec, we firmly believe that patients should actively participate in the various decision-making regarding their care and have access to concise and centralized information on clinical research. Our qualified staff, who provides personalized support in clinical research, facilitates the general public's access this scientific information.

For Health Professionals

We assist health professionals in finding available clinical trials for their patients, in a simple, quick and confidential manner. Upon request, Clinical Trials Quebec will conduct an extensive search of available clinical trials according to the required clinical criteria.

The Importance of Clinical Research

Science is a dynamic field. Medical innovation is at the heart of treatment avenues for patients. Canada and Quebec are popular locations for research and many clinical trials are launched here every year.

Clinical trials are research studies conducted with patients to evaluate or optimize new treatments or new ways of combining and administering existing treatments. By evaluating new treatments or new combinations of treatments, each study is designed to identify options to treat patients more effectively or improve their quality of life.

- Notice to participants -

As part of the pilot project of the Personalized Support Service, Clinical Trials Quebec reviews and freely translates information provided by research teams and made publicly available on clinical trial research platforms trusted by the medical community; but it does not evaluate the scientific content since some information may only be available in other languages. Clinical Research Quebec is not involved in the scientific and ethical evaluation process of research projects or in the referral of patients to research teams. Before participating in a clinical study, it is important for a patient to know the associated benefits and risks and to discuss them with a health professional. Participation in the pilot project is voluntary, and a person wishing to discontinue participation may do so at any time by contacting the team at contact@recherchecliniquequebec.com.
